DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Rivkin et al (US 6,270,582).

The applied reference has a common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Rivkin et al disclose a vacuum processing system comprising a transfer chamber (102), facets (106), and loadlock chambers (108) as required by the present claims. See column 2, lines 20-65 and Figure 1. Moreover, Rivkin disclose the formation of flat panel displays (column 1, lines 5-15) and the use of glass substrates (column 2, lines 15-25). Rivkin et al disclose reducing the pressure or cooling in the load lock chamber

as required in present claims 2 and 3. See column 5, lines 25-60. Furthermore, Rivkin et al disclose quartz windows (190) as required in present claims 4 and 5. See column 7, lines 45-60 and Figure 4. Therefore, Rivkin et al anticipate claims 1-5 of the present invention.

Allowable Subject Matter

Claims 6 and 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The cited prior art does not disclose coupling a sensor internally on the lid; and employing the sensor to determine a position of the substrate within the transfer chamber as required by the afore mentioned claims.
